

Tailor made solutions,
for compressing air and gas,
Everything you need,
one partner.

By working in partnership with Adicomp to secure your future

Welcome to Adicomp

Adicomp is leader in supplying technologies and services related to both air and gas compression into different industrial markets. Choosing Adicomp means to rely to a brand which takes part actively in the international market developing new technologies and supplying innovative application solutions for the future.

Adicomp, thanks to own wide range products and services, improves the quality of life offering innovative solutions around the world.

Since 1998, year of its foundation, The brand Adicomp stands for quality and reliability, but also for innovation and orientation to the future. Thousands of compression packages operating across the world prove our reliability even though they are for air compression, technical gases compression or for compressing any derivation of methane and biogas related to cogeneration world.

Adicomp has an approach aimed to satisfy customer's application needs and proposes itself as winning partner for engineering tailor made solutions capable both to compress and treat any kind of gas. Adicomp compressor stations are capable to be installed either indoor or outdoor and also into very polluted environments or with very hard climate conditions. In case of installations into explosive environments, our compression stations are manufactured according to ATEX95 & API618 directive.

Termomeccanica Group

Since 2013 Adicomp S.r.l. is part of Termomeccanica S.p.A. group.

The Termomeccanica S.p.A. group consists of numerous companies, branches and service centers located around the world.

Adicomp, as partner of the Termomeccanica group, it is a fundamental subject for the development of new technologies and solutions related to compression of the gas and, thanks to our constantly trained experienced employees, we ensure a rapid and concrete response to your needs, both in terms of products and services, ensuring your complete satisfaction.

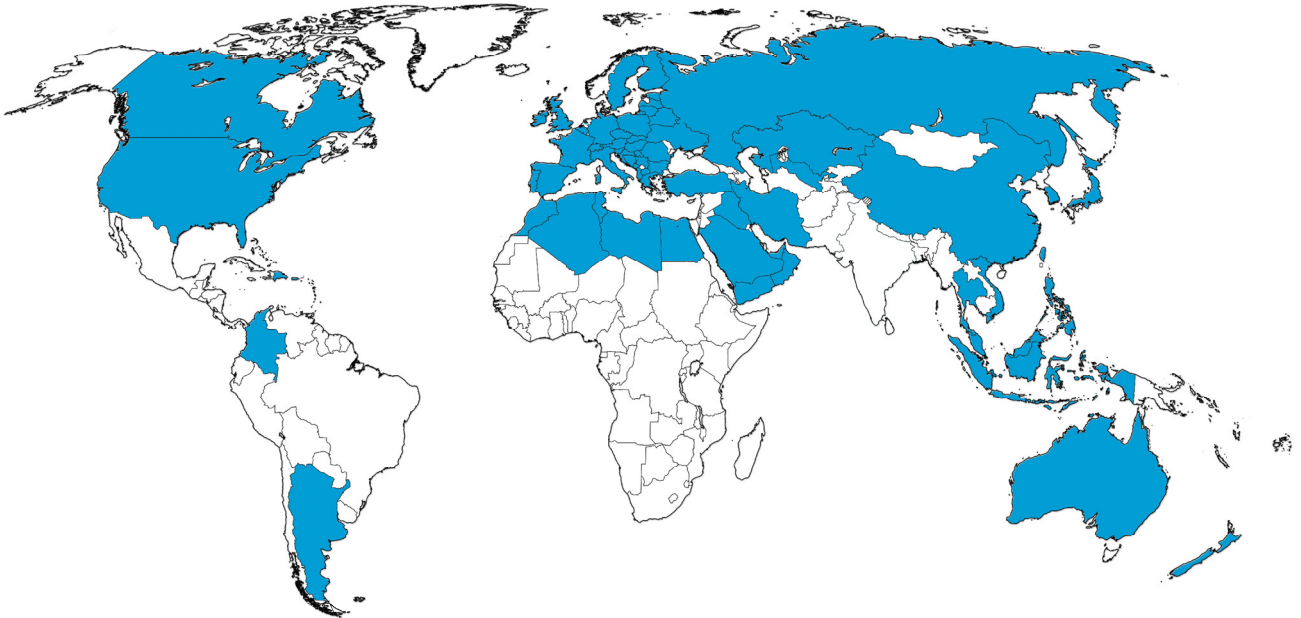

In this context, the continuous monitoring of the regulations of different countries where we are present and the consequent adaptation to them, it is an essential requirement to qualify in the compression industry market that's constantly evolving.

Who we are

+2000 UNITS
INSTALLED

62 NATIONS
SERVED

16 YEARS OF
EXPERIENCE

A team of professionals at your disposal

Our team is composed by engineers, designers, technicians, experts in the field and operating staff. Therefore it owns the necessary skills to assist and support customers in the development of their projects and satisfying any specific application needs.

Starting from the design till the implementation of all its packages, Adicomp proposes itself as reliable partner to get an efficient and guaranteed result.

Fields of applications

- Air compression and treatment for industrial, pharmaceutical, food & beverage applications, in accordance with ISO8573-1 (2001) directive for the quality of produced air.
- Air and technical gases compression and treatment for medium and high pressure applications in the PET industry, plastic and rubber, packaging etc.
- Compression and treatment of natural gas, landfill gas, syngas, biogas etc, for the generation of electricity and heat or the production of biomethane for the transportation, the stock or injection into national distribution grid.
- Air and Gas compression and treatment in compliance with existing regulations in the Oil&Gas industry and with ATEX 95 directive in case of explosive environments.
- Complete solutions for the compression and treatment of gases engineered in cargo containers and suitable for outdoor installation in environments with hard climatic conditions.

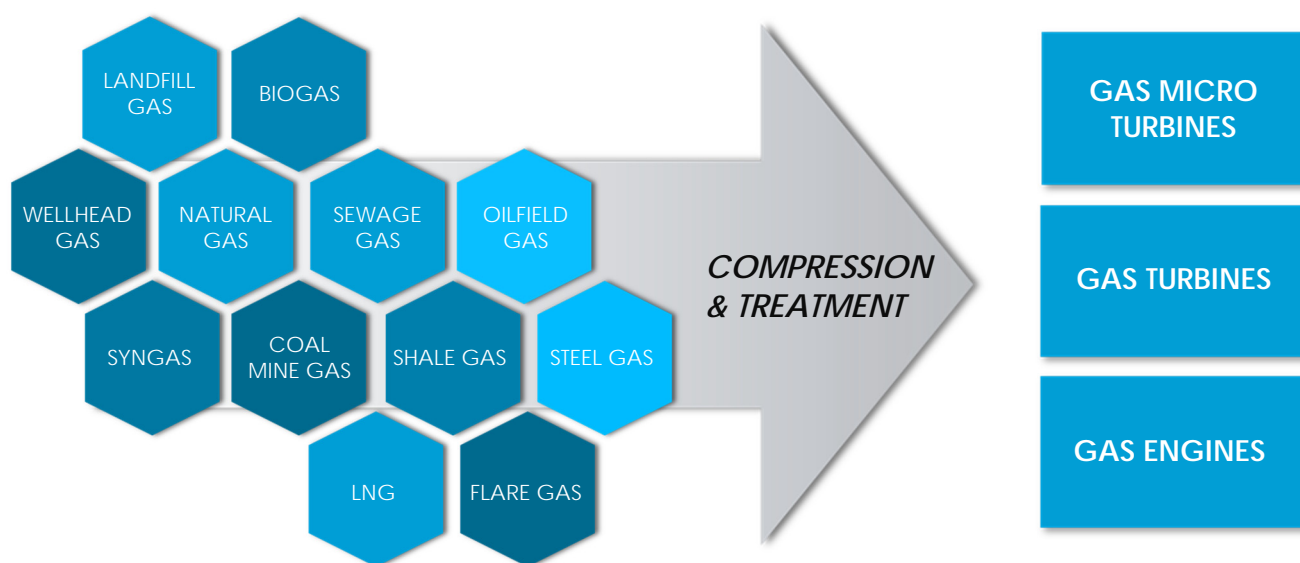

Our services

- *SALES & CONSULTING*
- *ENGINEERING & DESIGN*
- *MANUFACTURING & ASSEMBLING*
- *DOCUMENTATION*
- *LOGISTIC SERVICES*
- *INSTALLATION & COMMISSIONING*
- *TRAINING COURSE*
- *TECHNICAL SUPPORT*
- *ORIGINAL SPARE PARTS*
- *SCHEDULED MAINTENANCE*
- *WARRANTY SERVICES*

Power generation and cogeneration

Adicomp has always kept up with technological innovations in the field of either natural gas and biogas compression to optimize performances of compression systems for the generation of electricity and heat through gas turbines or gas engines. Compression systems engineered to operate in the presence of heavy environmental conditions, with maximum care in selecting installed components for a longer durability and reliability over time by the whole package. All our components are specific and dedicated to be used in presence of aggressive substances as part of treated gas mixtures, all of our components are tested in accordance with international regulations.

Biogas upgrading for biomethane production

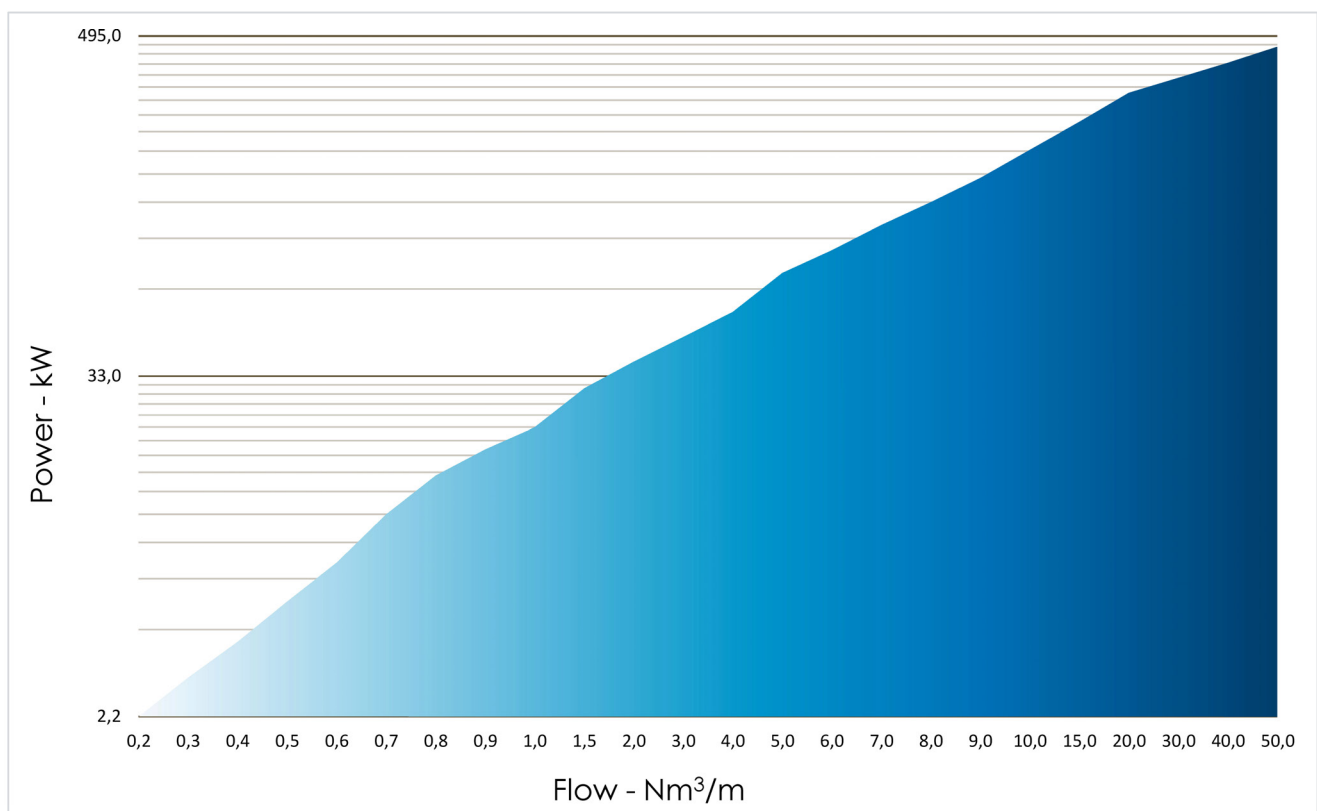

Thanks the experience got by working with manufacturers of systems for biomethane production, Adicomp is certainly the ideal partner to compress biogas for the upgrading process with membranes or PSA (Pressure Swing Adsorption). Adicomp can also manufacture packages suitable to compress the purified biomethane into national distribution grid or stock it into high pressure vessels.

Pressures and airflows available

The wide range of flow rates and nominal power possible with Adicomp packages, pressures ranging from a few mbar(g) to 300 bar(g), it makes us leader in providing the right solutions for your applications.
